HERS® INDEX
(HOME ENERGY RATING SYSTEM)

Estimated Monthly Energy Costs of a Resale Home:

\$245

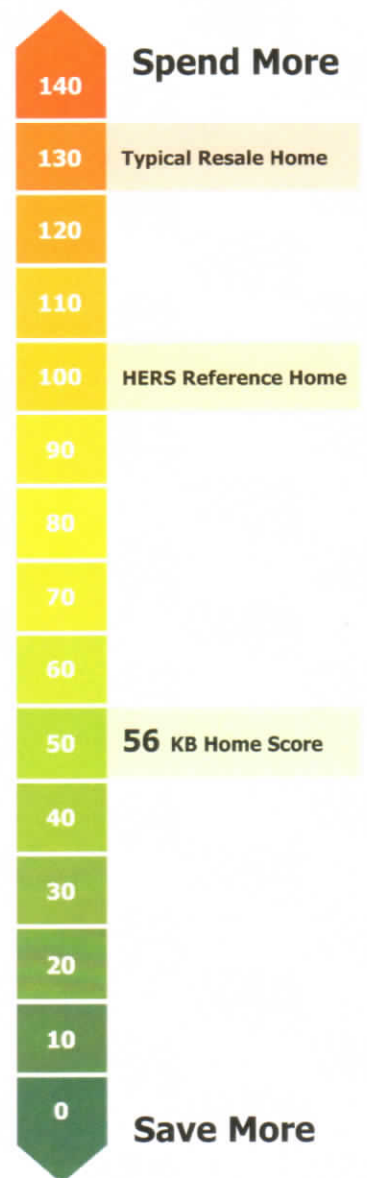

Figure represents estimated monthly costs of a typical similarly sized home. Actual energy consumption and costs will vary.

Estimated Monthly Energy Costs of This KB Home:

\$142

Figure represents estimated monthly costs of an ENERGY STAR-certified KB home. Actual energy consumption and costs will vary.

Estimated Annual Savings: **\$1,236***

©2019 KB Home. The HERS® Index is a registered trademark of the Residential Energy Services Network (RESNET). KB Home is not affiliated with RESNET or its service providers, or with any energy efficiency rating organization or related system or service provider software program. In 2018, the HERS Index score and the estimated energy costs and savings shown for this KB home plan and the typical resale home are determined using RESNET-approved software and RESNET factors and assumptions as to typical residential energy use and the standard features of this KB home plan as designed and of a typical resale home of similar model square footage (without accounting for local or household use), as determined by the RESNET software. Each is based on the heating and cooling systems, appliances and lighting that are included as standard items with this KB home plan and the typical resale home (as assumed by the RESNET software) and average local energy utility rates available at the time of determination. The estimated energy costs and savings shown do not include or take into account any applicable local, state or federal taxes and/or regulatory or energy utility provider-imposed fees, tariffs or charges. The comparison HERS reference home shown on the HERS Index (100) is the RESNET U.S. national reference home, which is built to the specifications of the 2006 International Energy Conservation Code. The comparison typical resale home shown at the HERS Index (130) ranks the energy efficiency of the existing U.S. housing stock compared to the RESNET U.S. national reference home, as set by the U.S. Department of Energy. KB Home does not warrant or guarantee that a HERS Index score for an airtight home will be equal to or lower than the home's as-designed score as shown for this KB home plan, or that any level of energy costs or savings (if any) will be achieved or maintained, even if a home is built as designed per the KB home plan. *Actual energy costs and savings (if any) for any built home will vary over time and they are substantially based on a number of factors and variables. Important information about the HERS Index and the estimated energy costs and savings figures shown for this KB home plan is available online at <http://www.kbhome.com/enrgyefficiency> and at KB Home community sales offices. Estimated Monthly Energy Costs of a Resale Home:

\$247

Figure represents estimated monthly costs of a typical similarly sized home. Actual energy consumption and costs will vary.

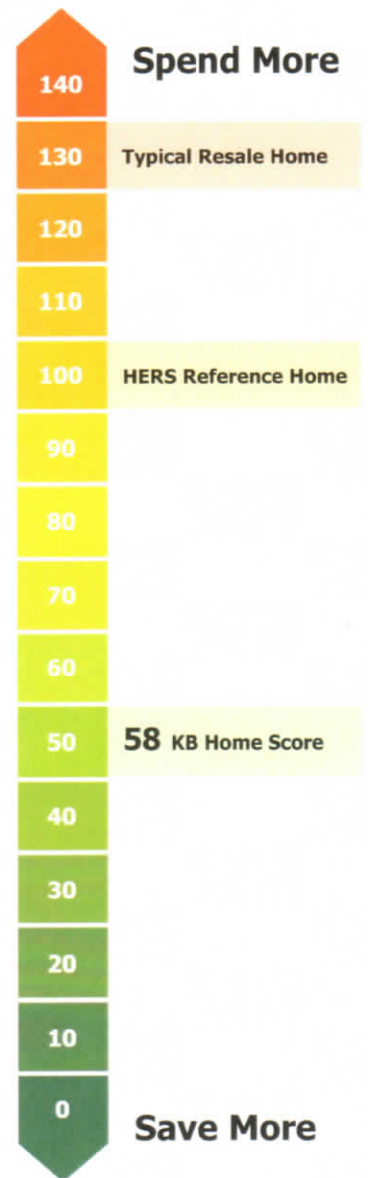

Estimated Monthly Energy Costs of This KB Home:

\$142

Figure represents estimated monthly costs of an ENERGY STAR-certified KB home. Actual energy consumption and costs will vary.

Estimated Annual Savings: \$1,260*

HERS[®] INDEX
(HOME ENERGY RATING SYSTEM)

©2019 KB Home. The HERS[®] Index is a registered trademark of the Residential Energy Services Network (RESNET). KB Home is not affiliated with RESNET, or its service providers, or with any energy efficiency rating organization or related system or service provider software program or label. The HERS Index score and the estimated energy costs and savings shown for this KB Home plan and the typical resale home are determined using RESNET-recognized computer software and RESNET factors and assumptions as to typical residential energy use and the standard test case of this KB Home plan as designed and of a typical resale home of similar design square footage (without accounting for climate or occupancy use) as assumed by the RESNET software. Each is based on the heating and cooling systems, appliances and lighting that are included as standard items with this KB Home plan and the typical resale home (as assumed by the RESNET software), and average local energy utility rates available at the time of determination. The estimated energy costs and savings shown do not include a take into account any applicable local, state or federal taxes and/or regulations or energy utility provider-imposed fees, tariffs or charges. The comparison HERS reference score shown on the HERS Index (100) is the RESNET U.S. national reference home, which is built to the configurations of the 2006 International Energy Conservation Code. The comparison typical resale home shown on the HERS Index (130) reflects the energy efficiency of the existing U.S. housing stock compared to the RESNET U.S. national reference home as set by the U.S. Department of Energy. KB Home does not warrant or guarantee that a HERS Index score for any KB Home will be equal to or lower than the homes as designed score as shown for this KB Home plan or that any level of energy costs or savings, if any, will be achieved or maintained, even if a home is built as designed per the KB Home plan. **Annual energy costs and savings (if any) for any KB Home will vary over time and may vary substantially based on a number of factors and variables. Important information about the HERS Index and the estimated energy costs and savings figures shown for this KB Home plan is available online at <http://www.kbhome.com/energy-efficient-homes> and at KB Home community sales offices. HERS® INDEX
(HOME ENERGY RATING SYSTEM)

©2018 KB Home. The HERS® Index is a registered trademark of the Residential Energy Services Network (RESNET). KB Home is not affiliated with RESNET or its service providers, or with any energy efficiency rating organization or related system or service provider, software program, or utility. The HERS Index score and the estimated energy costs and savings shown for the KB Home pair and the typical resale home are determined using RESNET-approved computer software and RESNET factors and assumptions as to typical residential energy use and the standard features of the KB Home pair as designed and of a typical resale home of similar general square footages, without accounting for second or third-hand modifications as assumed by the RESNET software. Each is based on the heating and cooling systems, appliances and lighting that are included as standard items with the KB Home pair and the typical resale home as assumed by the RESNET software, and average local energy utility rates available at the time of determination. The estimated energy costs and savings shown do not include or take into account any applicable local, state or federal taxes and/or regulations or energy utility provider-imposed fees, tariffs or charges. The comparison HERS reference home shown on the HERS Index (100) is the RESNET U.S. national reference home, which is built to the specifications of the 2006 International Energy Conservation Code. The comparison typical resale home shown on the HERS Index (130) marks the energy efficiency of the existing U.S. housing stock compared to the RESNET U.S. national reference home, as set by the U.S. Department of Energy. KB Home does not warrant or guarantee that a HERS Index score for an actual home will be equal to or lower than the home's designed score as known for this KB Home pair, or that any level of energy costs or savings (if any) will be achieved or maintained, even if a home is built as designed per this KB Home pair. Actual energy costs and savings (if any) for any built home will vary over time, and may vary substantially, based on a number of factors and complex. Important information about the HERS Index and the estimated energy costs and savings figures shown for this KB Home pair is available online at <http://www.kbhome.com/energy-efficiency-scores> and at KB Home community sales offices. HERS[®] INDEX
(HOME ENERGY RATING SYSTEM)

Estimated Monthly Energy Costs of a Resale Home:

\$289

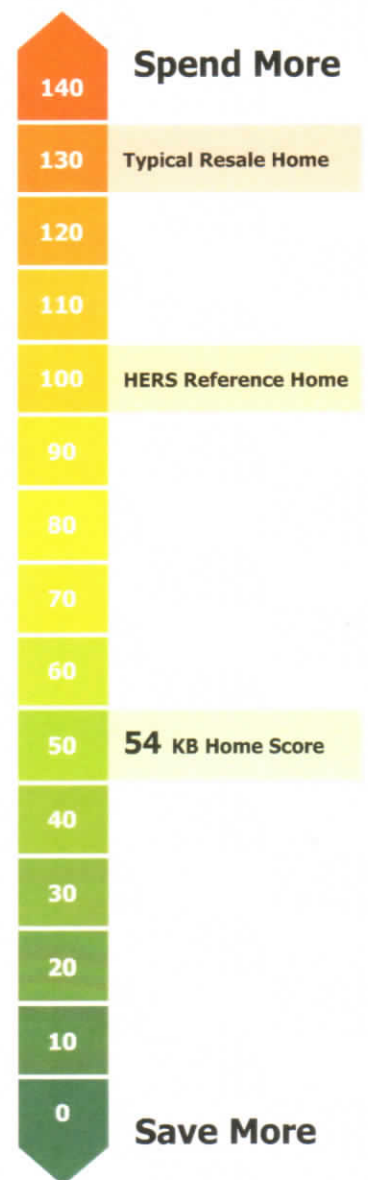

Figure represents estimated monthly costs of a typical similarly sized home. Actual energy consumption and costs will vary.

Estimated Monthly Energy Costs of This KB Home:

\$157

Figure represents estimated monthly costs of an ENERGY STAR[®]-certified KB home. Actual energy consumption and costs will vary.

Estimated Annual Savings: \$1,584*

©2019 KB Home. The HERS[®] Index is a registered trademark of the Residential Energy Services Network (RESNET). KB Home is not affiliated with RESNET or its member organizations. RESNET is a voluntary, not-for-profit organization that provides software programs to rate the HERS Index score and the estimated energy costs and savings shown for this KB home plan and the typical resale home. RESNET's software programs use and the standards features of this KB home plan as designed and of a typical resale home of similar square footage without accounting for actual construction, as assessed by the RESNET software. Each is based on the heating and cooling systems, appliances and lighting that are included as standard items with this KB home plan and the typical resale home as assumed by the RESNET software. RESNET's software also evaluates the energy efficiency of the building envelope, including the insulation, windows, doors and other features. The comparison HERS Reference Home shown on the HERS Index (100) is the RESNET's U.S. national reference home, which is built to the specifications of the 2006 International Energy Conservation Code. The comparison local resale home shown on the HERS Index (130) ranks the energy efficiency of the existing U.S. housing stock compared to the RESNET's U.S. national reference home, as set by the U.S. Department of Energy. KB Home does not warrant or guarantee that a HERS Index score for an individual home will be equal to or lower than the homes as designed, such as shown for this KB home plan, or that any level of energy costs or savings, if any, will be achieved or maintained, even if a home is built as designed on this KB home plan. Actual energy costs and savings, if any, for any built home will vary over time, and may vary substantially based on a number of factors and variables. Important information about the HERS Index and the estimated energy costs and savings figures shown for this KB home plan is available online at <http://www.kbhome.com/energy-efficient-homes> and at KB Home community sales offices.
